

Elevated Observation Enclosure

Products:

- ✓ OmniFlex Framing System
- ✓ Fire and Sound Panels
- ✓ 2' Tall Mezzanine

Benefits Provided:

- ✓ Enhanced Visibility
- ✓ Improved Operational Efficiency
- ✓ Modular Flexibility
- ✓ Controlled Office Space

The Situation

A paper manufacturer aimed to establish office space for supervisors while improving visibility of their paper line operations and ensuring safety and space efficiency in their facility. PortaFab's modular wall and ceiling systems were chosen to quickly and cleanly build an elevated observation enclosure.

The Challenge

The primary challenge was operating within an active plant. Additionally, the office space needed to be elevated for better visibility, requiring a mezzanine base. PortaFab's distributor had to accommodate the ongoing plant operations during construction.

The Solution

PortaFab's distributor enlisted the help of PortaFab's in-house engineering team to reduce on-site fabrication. This streamlined approach provided a single source solution, allowing the manufacturer to effectively address their visibility requirements while enhancing operational efficiency and safety in their paper manufacturing facility.
