

Load-Bearing Modular Buildings Create New Space for Manufacturer

Case Study

Application: Modular Offices and Lunchroom with Storage Decks

Products:

- ✓ Series 300 with Fire and Sound Wall Panels

Benefits Provided:

- ✓ Effective sound control
- ✓ Ability to re-locate easily
- ✓ 2-Story design to maximize space utilization

The Situation

Mercury Stainless Corporation, a rapidly growing stainless steel processor for the restaurant and dairy industries, had outgrown its space for its accounting and production departments and needed a more comfortable environment for plant employees to enjoy their lunch and breaks.

The Challenge

There was very limited space in the facility to accommodate these new functional areas. While plans existed for future growth, Mercury needed a cost-effective short-term solution that could also be adapted to accommodate expansion needs in the future. Finally, the structure had to be non-combustible to comply with local building codes and everyone wanted the solution to offer a safe, quiet and comfortable environment.

"The PortaFab systems were ideal for our rapidly changing space needs... individual panels, including doors and windows can be moved or changed without disturbing the rest of the building so we have the flexibility to expand quickly and economically. Plus, the buildings are easy to heat and cool and maintenance is practically non-existent."

- Betty Robertson of Mercury Stainless

The Solution

- ✓ Two units were installed: a 20' x 30' lunchroom and a 20' x 40' office with load-bearing roof to house the production and accounting staff.
- ✓ The units featured the Series 300 premium 3" wall system with Fire & Sound wall panels for the project.
- ✓ Stainless steel processing is a noisy business, but the three-inch thick Fire and Sound panels eliminated the problem of noise pollution.
