

Mezzanine Integration for Client Showcase

Case Study

Application: Audio & Visual Lab to meet with clients during product solution demonstrations and create functional storage space for secured items above.

Products: OmniFlex Steel Fire & Sound walls tied into the underside of a mezzanine.

Benefits Provided:

- ✓ Create a controlled environment for specialized audio and visual equipment.
- ✓ Provide a showpiece that utilized NBS Solutions' custom wall coverings for product demonstration.
- ✓ Minimize cost on the upper level of the maintenance area by utilizing existing lighting and fire suppression.

The Situation

The customer was looking for a way to add meeting and storage space within their facility while also beautifying it for visitors.

The Challenge

The customer was able to create more functional space within their existing environment and provided a marketing tool for their sales force while promoting modular construction as a viable solution to their clients.

The Solution

PortaFab worked closely with their customer to coordinate and ensure that the design and integration of the modular walls and mezzanine had a clean and simple fit. PortaFab also provided structural calculations and PE-Stamped drawings to help facilitate the permit process.

As a PortaFab Dealer, the lab wanted the ability to demonstrate to their clients the unlimited interior building solutions they could offer with our products. They did consider using conventional construction as an alternative for the buildings; however, the adaptability and flexibility to expand or relocate the structures was critical in their decision process.
